

ATScrubbers™

*Algal Turf Scrubbers® for the
Reef Aquarist*

*Only True ATScrubbers™ are specifically designed to maximize growth of algal turfs. Photosynthesis removes nitrogenous and phosphoric wastes, as well as heavy metals and organics, while producing valuable oxygen. Algal turfs are also the most efficient nutrient-fixing organisms known. **Without the turfs, you don't have a scrubber!***

Mini ATScrubber™

This sleek, all-black acrylic unit was formerly known as our hang on the back model. It measures 35.5" long and mounts on the back of any standard *glass* aquarium long enough to accommodate it. It also includes a dump chute and an adjustable prefilter box for surface skimming.

- Includes 2-28 watt 6700K compact fluorescent fixture and reflector
- 97 square inches of two-ply screen
- Recommended for glass tanks up to 100 gallons

\$799.99

ATShuttles™

Our ATShuttles are designed mount directly above or sit on top of the aquarium. They are perfect for acrylic tanks that do not accommodate the hang on the back ATScrubber. These systems provide a larger, more forceful surge wave. Scrubber Shuttles feature all black acrylic construction with attached dump chute. A surface skimming box is not included in these systems. ATShuttles can also be used over a sump, or remotely. The only true requirement is that the 12x6" footprint of the end where the water exits be placed such that water is returned to the system's water column.

ATShuttle Model 100
